

WHEEL BEARINGS AND HUB ASSEMBLIES

FVP Wheel Bearings and Hub Assemblies are built to the industry's highest quality standards. Each hub assembly or wheel bearing match OE design specifications for exact fit, peak performance and increased service life. Components are tested independently to ensure only top grade materials are used in construction. The wheel hub assembly on-board electronics comply with specific vehicle computer requirements so the vehicle safety systems operate at maximum performance levels.

- ISO/TS 16949 Certified Manufacturing Facilities produce OE quality parts for durability and optimal vehicle performance
- Exact OE Specifications for exact fit, peak performance and increased service life
- Rigorous Testing to ensure the product provides trouble-free installation and operation
- Exacting bearing configuration meet or exceed the design of the original
- ABS sensors, cables and connectors are subject to application-specific computerized testing so the vehicle safety systems operate at peak performance levels
