

## BRAKE CALIPERS

**FVP Brake Calipers** are remanufactured using an industry leading process to improve performance and reliability. From teardown to testing, each unit goes through a carefully controlled rebuilding process to ensure the highest quality remanufactured caliper on the market.

- Carefully controlled teardown, inspection and rebuilding process based on OE specifications
- Application specific cable guides, brackets, return springs and hardware are included where applicable
- Every threaded part and bleeder hole is chased to restore threads to original specs to eliminate cross threading
- All rubber components are sourced from OE level manufacturers to restore to like-new condition and performance
- Phenolic pistons are always replaced
- Caliper bodies are dipped in an anticorrosive emulsion to protect from surface corrosion
- 100% are leak tested using the same testing equipment as OE calipers
