GOLF BATTERIES

Golf carts and commercial electric vehicles require batteries that perform over the long haul. FVP VoltEdge golf and commercial electric vehicle batteries provide solutions for your 6, 8 and 12 volt application needs. Every FVP golf and commercial electric vehicle battery is engineered to meet run time requirements, with long term dependability and reliability.

Calcium/Calcium Grid Alloy

Reduces gassing and extends intervals between watering. Provides excellent corrosion resistance for longer life.

Higher Density Paste

Optimizes energy density and prolongs cycle life by resisting material shedding and plate deterioration.

Fiber Reinforced Separators

Helps retain cell compression during cycling and improves plate life in high vibration applications.

Optimized Plate Design

Balances structural design with performance. Reduces common failure modes found in Deep Cycle batteries.

Popular Configurations

The GC2, GC8 and 12-volt golf cart products are available in several configurations making it easy to provide your customer with exactly what they need.

Convenient Carry Handle

Simplifies installation and provides an easy, safe method of handling the batteries.
