

The Confident Solution.™

ReliaGuard<sup>FILTERS</sup>

# FUEL FILTERS

**FVP ReliaGuard Fuel Filters** are engineered to meet all O.E. application requirements and provide a consistent fit.

ReliaGuard Fuel Filters are designed to keep vehicles running longer by screening out dirt, rust and other contaminants that cause rapid wear and failure of the vehicle's fuel system and other vital components.

FVP offers high quality, high efficiency fuel filters that maintain the overall performance of the vehicle's fuel system.

**Fuel System Contaminants Include:**

- **Particulates** that cause the fuel filter to plug quickly.
- **Precipitates** that settle until the fuel is agitated and then are problematic.
- **Fungus and bacteria** that thrive and spread in moist environments.

*Dirty filters can cause drivability problems, reduce fuel system component life & increase fuel consumption.*

*Clean filters protect the fuel system components and help to increase gas mileage.*
